

Freight Forwarding System

Timely solutions for your shipment needs.

Shipment Support Control System

Customs clearance differs by countries and always creates confusion on tariff classifications, duty rates, and unexpected accessory charges. With our global network of customs brokerage services, customers don't have to worry, and manage international trade easily.

Yamato enables full integration into customer's EDI infrastructure to support their export shipments. Using CES1 (Customized Export Systems 1), customer's EDI infrastructure seamlessly integrates with Yamato and customers can improve their operational efficiencies with our electrical data transmission to the destination for quick import customs clearance and final delivery.

Features include: support by creating customer's shipping documents, and sending shipping information to the destination countries electronically in timely manner for quick import entry.
